Giant Wheel GLC-52C

Giant Wheel GLC-52C, a much more special and first-of-its-kind model in the market. Elegant 4 columns, simple single pipe rim, round cabins, wire-rope spoke design, all of these, are integrated in the novel Giant Wheel GLC-52C!

The wheel's diameter measures 49.5m. When installed, the overall height is around 52 meters. The drive rim of the wheel is supported by 4 strong columns, with 2 on each side. 30 cabins are suspended on brackets evenly distributed around the drive rim. Each cabin decorated in a classy fashion, pivots steadily under gravity as the wheel rotates.

Minimalistic and iconic, GLC-52C is a great installation for property developers.

Water Rides

- Chute Ride
- Raft Ride
- Warship

Chute Ride JL-30D

Chute Ride JL-30D is a thrilling water ride suitable for a land or water park. A gondola loaded up with excited riders is chain-lifted up to the 30m-high lift hill, from where it slides smoothly along the overhead trackway for a while, giving riders a moment of peace to visually indulge themselves with park scenery nearby and natural landscapes far away.

The peak of the ride comes when the gondola charges downwards into a water pond along a sharp slope, crashing out thousands of waves and splashes. It is a perfect hot summer ride to give passengers some wet time.

Chute Ride JL-26R

JL-26R is a chute ride that features turntable rotation, bumpy forwarding, bumpy rearwarding and splashdown. The adoption of the turntable significantly reduces the ride's turning radius, thus less land is required to lay out the entire attraction. The ride has a lift hill that is able to elevate the gondola up to 26 meters high, from where fun and thrill really begins.

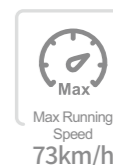

As a bonus, media and effects can be incorporated into the ride section after the intense splashdown. May you get amazed and dazzled. We customize the ride's track layouts to best fit the park's land features.

Chute Ride JL-26D(B)

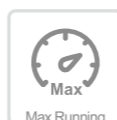

JL-26D is a thrilling chute ride running on an elevated trackway. With the incorporation of a number of fun elements, it is a great water ride in a land park for hot summer seasons. The ride journey begins as the loaded gondola climbs up to the peak of the lift hill. Starting from an elevation of 28 meters, the gondola proceeds traveling slow and smooth, allowing riders time to savor the spectacular scenery that the park and the neighborhood have to offer. Thrills max up as the gondola eventually plunges into a body of water, crashing out waves and splashes. We customize track layouts to best fit the park's land features. Every installation is unique and fun!

Chute Ride JL-18A

The Chute ride is a summertime love that visitors won't miss at a land park. Ascending up to 18m high, onboard passengers embark on a journey full of suspense and surprise. JL-18A features two rotating platforms that orient the boat in a way so that a minimum turning radius can be achieved, which means less land usage. It also boasts backward coasting along the overhead section between the two platforms.

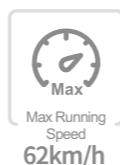

Seated and secured with a lap bar in a boat with a 20-rider capacity, fun-loving passengers rock and roll, dip, hump along the water ride's trackway, and eventually thrust into the waters of finality.

Suspended Monorails XYC-4B

A lovely ride, isn't it?

When you board such a ride, you better have your loved one beside you. Because it is so bonding. The butterfly vehicle carries you two in a steady and controlled pace along an overhead trackway while the wings over your head flutter all the way along. If you are naughty, pull the handle, give the car a little swirl and hear out your partner holler.

Vehicles are suspended below the elevated trackway. Each vehicle accommodates 4 persons. Track layout and vehicle quantity can be customized.

Classic Rides

- Armor Rides
- Super Swing
- Go-go Bouncer
- Space Shuttle
- Frisbee
- Viking

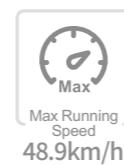

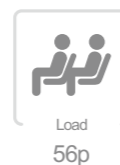

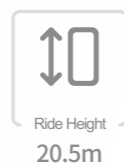

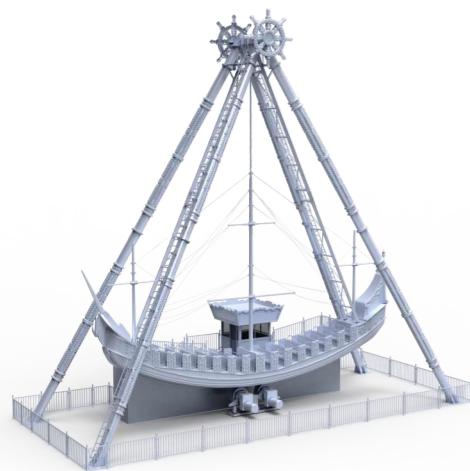

Viking HDC-56A

This classic pendulum consists of a tower structure made of four columns, a pair of swing arms, and a gondola.

The gondola is suspended onto the top of the tower via swing arms. When the ride is in operation, it swings back and forth to a max 60 degree, enabled by the propulsion tyre mounted on the center of the ground just above the middle line along the bottom of the gondola.

Restrained by lap bars on each row, safe and sound, passengers are able to experience a significant amount of airtime.

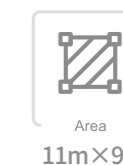

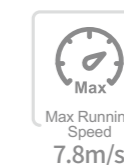

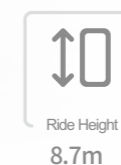

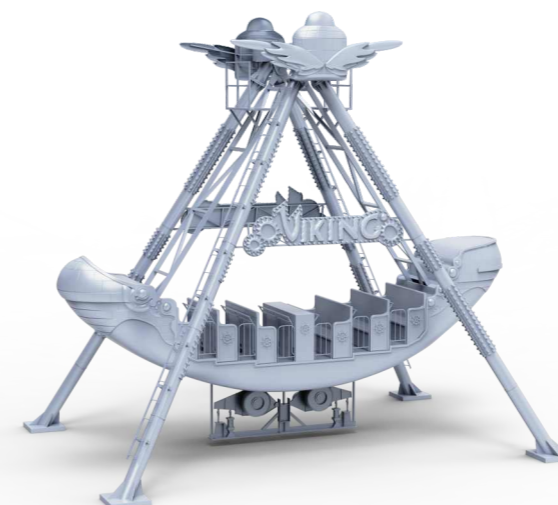

Viking HDC-24A

Standing 9m tall, this classic pendulum ride consists of a tower structure consisting of four columns, a pair of swing arms, and a 24-seat gondola.

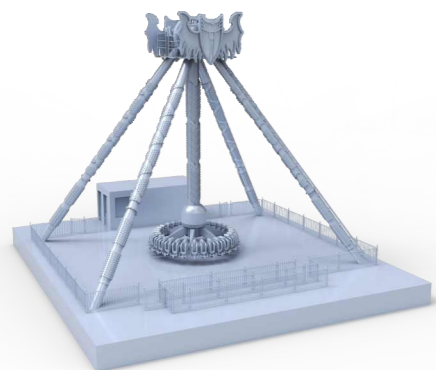

The gondola is suspended onto the spindle located at top of the tower via swing arms. When the ride is in operation, the gondola swings back and forth up to an angle of 60 degree max. The propulsion is powered by the motor-driven frictional tyre mounted on the center of the ground just above the middle line along the boat bottom.

Restrained by lap bars on each row, safe and sound, passengers are able to experience the thrills that a swing gondola brings.

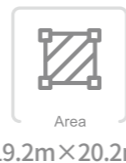

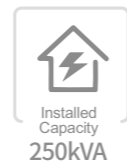

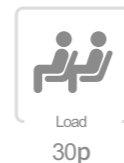

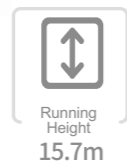

Frisbee DBC-30B

Frisbee is a giant pendulum ride that swings the riders up to 24 meters high. Secured in seats on the carousel, riders are able to experience a combined motion of spinning and swinging. The sensations are just overwhelming.

This pendulum ride comes with 30 seats mounted around on the carousel. Each seat is fitted with a shoulder restraint to keep the rider safe in place. It is able to swing up to an angle of 120 degree and suspend passengers at a highest point for 1second or 2 and then sweeps all the way down.

It is a classic stimulating ride that visitors hold dear.

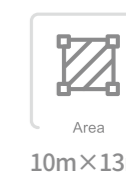

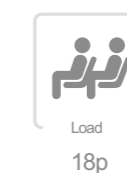

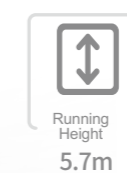

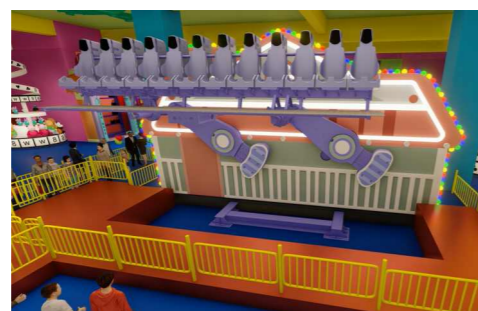

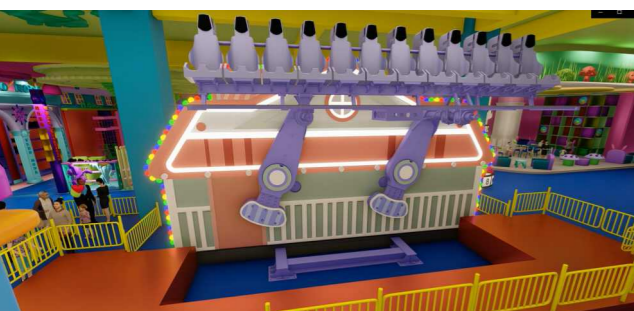

Crazy Bus SBF-18A

SBF-18A is a ride similar to SBF-24A. The vehicle features a themed bus with 18 seats in 6 rows.

Guests on board the ride face sideways in the direction of the rotation.

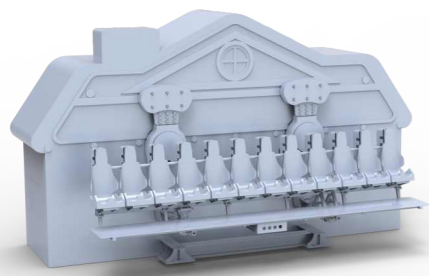

Little kids love this kind of rides.

Crazy Surfing SBF-12A

Crazy Surfing, a DC motor-driven thrill ride, features arms propelling a cabin in a blend of rotation and translation, tracing circular paths like sea waves. Riders inside enjoy alternating spins, mimicking surfing thrills with a gentle breeze adding freshness. At night, its colorful exterior and changing lights transform it into a fashionable, captivating attraction.

Go-go Bouncer TT-42A

Go Go Bouncer is a star ride in a park. In contrast with other similar round rides which move the arms (cabins) up and down in a rather rigid or mechanical way, our ride literally bounds cabins up as if passengers were sitting on a huge suppressed spring.

It comes with 14 cabins, each holding 3 persons. Passengers are secured via. shoulder restraints. When the ride is in operation, passengers rotate around the center while springing up and down, creating an illusion that they are bounding forwards.

It is a popular ride with both kids and adults, thrilling and lots of fun.

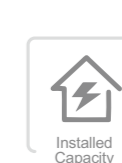

Go-go Bouncer TT-36B

Go Go Bouncer TT-36B is the cousin of TT-42A with 12 arms. It has the load capacity of 36p. In contrast with other similar round rides which move the ride's arms (cabins) up and down in a rather rigid or mechanical way, Go Go Bouncer literally bounds cabins up as if passengers were sitting on a huge suppressed spring.

Passengers are secured via. shoulder restraints. When the ride is in operation, passengers rotate around the center while springing up and down, creating an illusion that they are bounding forwards.

Popular with both kids and adults, you may want to have one at your park.

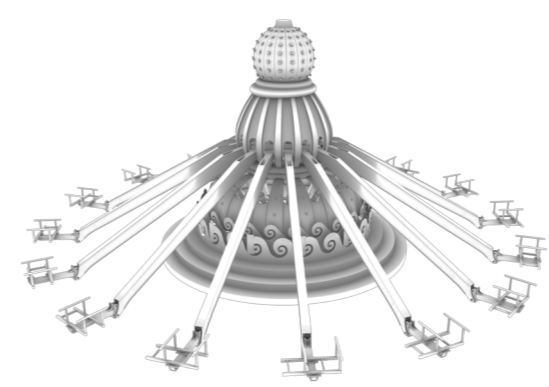

Space Shuttle ZK-64B

Space Shuttle is an interactive round ride. As the ride rotates, passengers in the cabin may work on the console to control the cabin movement in the vertical direction. Sensation intensifies when a constant change in altitude is introduced.

A cabin is mounted on the far end of each swing arm. The up-and-down movements of swing arms is driven by pneumatic power. There are total 16 cabins, with each cabin holding up 4 passengers. All the arms are connected to a central carousel which is motor-driven to rotate on its own axis.

It is a family ride that is meant to bond, suitable for parks of any size.

Super Swing FY-39A

FY-39A is a swing tower ride, 8.6m tall. The carousel rises and rotates, lifting and flinging the suspended chair seats. The seats are arranged to rotate on two orbits, with 17 single seats on the inner orbit and 11 double seats on the outer one. The ride has a large THRC of 780p/h.

It is a popular swing ride suitable for small and medium amusement parks.

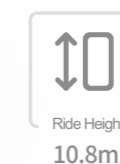

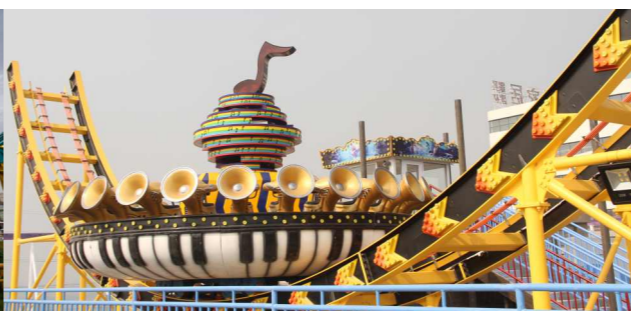

Super Swing FY-48C

Super Swing is one of the beloved swing rides. It features suspended chairs flung outwards, rotating and tilting in the midair.

The carousel rises and starts rotating. When it reaches the predefined elevation, it starts to tilt sideways, adding more dynamic to the ride motions. The ride is fitted with 48 single seats suspended to the carousel with chains.

The ride's central column is themed as a blue and white pottery vase with a multi-colored canopy on top. Thrilling and fun, it is a ride for the young and the old.

W-Disco DSG-40A

Standing 15.2m tall, this novel disco ride consists of a “W” shape track and the support, and a 40-ride giant vehicle.

The W-track makes the experience unique and different from the conventional disco ride. While riding the waves along the track, the vehicle rotates by itself and gives the riders more spatial motion.

Firing Train YKC-48C

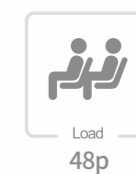

Firing Train features a central support with slewing bearings connecting 16 rotating arms. Each arm is equipped with travel wheels, and four of them are powered. Sixteen cabins are installed between these arms. Beneath the travel wheels, a circular undulating track is laid out. Driven by the powered arms, the Flame Chariot rotates around the central star with ups and downs. While the cabins rotate with the arms, they also move up and down along the track, providing passengers with the thrill of multi-layered composite rotational movements.

Wonder Lantern HD-48A

HD-48A is a suspended round ride. It is fitted with 12 cabins, each carrying 4 riders. The ride's 48-seater design gives it a large capacity up to 960pph.

During the ride, the carousel slowly rises to the starting position and begins to rotate. Then the carousel together with cabins is lifted up the guide post while being rotated. When it reaches the highest point, it stays at inclination of 15°, tilting all cabins to introduce extra motion varieties.

Magic Poker FY-32B

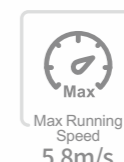

Magic Poker FY-32B is portable ride that requires no fixed foundation work. The ride is designed with 8 cabins, 4 riders each.

While the ride is rotating around the central fixture, riders can actually mess with the steering wheel installed in each cabin to spin the individual cabin.

Totally potable, FY-32B is a great selection for carnivals.

Bumper Cars PPC-106A

Bumper cars are always popular in an amusement park. The thrill that a car collision delivers just feels indescribably great.

PPC-106F is designed to work with a floor pick-up system. In a floor pick-up system, the power supply is fed to a bumper car via flooring material only.

A classic amusement ride for both young and old, the bumper car facility can be built indoor or outdoor. Flooring can be customized as the site layout requires.

Tractor TLJ-4A

The Tractor is a type of small train-like equipment themed after the realistic design of a tractor. The vehicle boasts a cool appearance with vibrant colors, and its interior is modeled after an actual tractor. Children can experience the feeling of driving a tractor by playing with components such as the steering wheel and manual levers, enriching their cognitive abilities and enhancing the fun of sightseeing. Each vehicle is equipped with four seats, with the front row designated for children and the back row for adults. As the tractor weaves through the scenic landscapes of the beautiful attraction, families can enjoy the beautiful scenery while sharing joyous moments together.
