AGV Dark Ride WGC-12A

AGV(Automated Guided Vehicle) Trackless Dark Ride is a new high-tech immersive attraction. Adopting laser ranging and positioning technology to obtain the real-time position data of the vehicle, its control system controls the position and direction of two groups of independent steering wheels so as to realize the movement of the vehicle according to the set track. Differing from traditional trackless dark rides, Jinma innovatively integrates Taxiing track into the ride guided by AGV system, thus making the experience richer, and more unique and immersive.

Interactive Dark Ride HZC-8A/BJX-2A

With a curious mixture of 360° rotation vehicles, interactive shooting & real-time scoring, 3D HD films and various special effects, Interactive Dark Ride is a highly immersive attraction that allows passengers to play against someone in realistic virtual scenarios and thus delivers a funny immersive experience for passengers!

With 3D glasses on, passengers go through a virtual filming of exciting animated games. At each game play set, the vehicle stops, passengers grab the spring-action blaster and take aim at various 3D targets; the more targets hit, the higher the score. After the game is over, the total score of all players will show up on the screen. Passengers can not only have fun at the shooting game and 3D animation, but also have a happy competition with other players for the highest score as a game champion.
